

# Clock Face Bump It! For 5's Facts

**Set up:** If only working numbers 1-10, block off the squares for 11 & 12. Need 10 chips of one color for each player and 10-sided die.

**To play:** Players take turns.

- On your turn, roll the die and find that number on the clock. Multiply that number by 5 and write the answer in the square next to the number, then cover the square with your chip.
- Continue play, taking turns.
- If a player rolls a number that has already been solved, the player can review the equation then bump the other player's chip off the square and cover it with their chip. Bumped chips are now out of play.

**How to Win:** Once all of the chips have been played, whichever player has the most chips on the board wins.
